

# **Specialist provider of Lifting Equipment, Fall Protection Systems, On Site Rigging & Testing Services**

**lift-rite.com**

  
**Benbecula**  
Group

# We are a specialist provider of lifting equipment, fall protection systems, on site rigging and testing services.

**Our business based in the North East of England, is focused on providing innovative and cost saving solutions that fulfil our client's aspirations, while adhering to statutory health and safety obligations.**

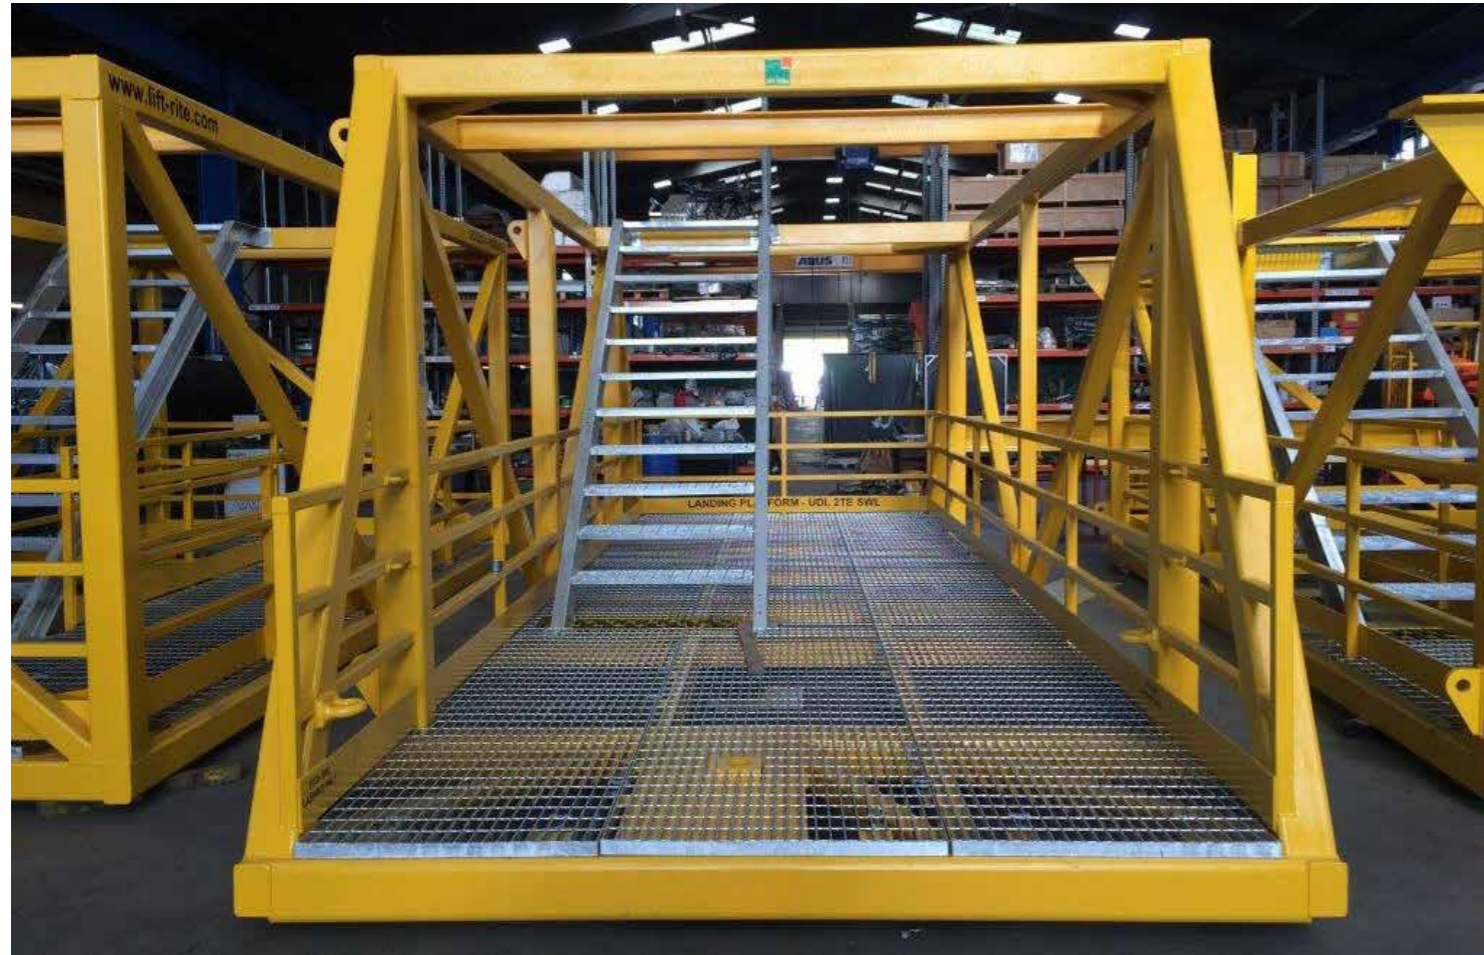

Lift-rite offer a comprehensive range of engineering services including: proof load testing, inspection, non-destructive testing, servicing, repair and calibration through to a complete design and manufacture service of bespoke lifting solutions.

**We provide the very best in product excellence across the complete range of lifting equipment and lifting accessories that give our clients peace of mind with products that are 100% quality assured.**

At Lift-rite Engineering Services we design, manufacture and test bespoke mechanical equipment and systems. Our focus is providing customers with product excellence and effective lifting solutions. We also offer a comprehensive range of consultancy services including lift planning, design of fall protection systems and the inspection and servicing of loose lifting equipment.

## SECTORS

MARINE  
OIL & GAS  
MANUFACTURING  
CONSTRUCTION  
POWER GENERATION  
OFFSHORE

**We have gained a worldwide reputation offering a complete range of lifting solutions for hire or sale.**

**Lift-rite have the technical experience and a comprehensive range of products to support all of your engineering requirements.**

We offer a vast range of equipment for hire or sale and our on-site service teams can complete projects such as contract lifting, machinery moves, proof load testing, jacking operations through to statutory examination of lifting equipment, mechanical engineering and complete rigging services.

**Utilising our LEEA qualified engineers, our customers can be assured that their lifting equipment is in safe and competent hands.**

**ISO 9001:2015**

## **SERVICES**

ENGINEERING CONSULTANCY  
DESIGN & MANUFACTURING  
BESPOKE LIFTING EQUIPMENT  
LIFT PLANNING & EXECUTION  
SALES & HIRE  
LOLER TESTING & INSPECTION

# A highly skilled and adaptable team offering practical experience.

## LIFT PLANNING & EXECUTION

### Marine Mobilisation & Demobilisation

Lift-rite can provide our own experienced managers, appointed lift supervisors and qualified rigging personnel to manage your mobilisation/ demobilisation projects from start to finish.

## ENGINEERING CONSULTANCY

### Lifting Projects

Our experienced team provides total lift management including design and planning, equipment selection, method statements and risk assessments. We also support complex lifting projects with the provision of qualified lift engineers, supervisors and riggers.

### Product Development

From 3D concept designs to detailed finite element analysis to physical trials, we can support a vast array of out of the ordinary product development projects.

## SALES & HIRE

### Test Weights & Cradles

With our stock of 500 tonnes of metal test weights together with cradles in various capacities of up to 300 tonnes, we can support a wide range of load tests that require the use of live loads. Our test weight cradles also have the added advantage of being designed and manufactured in-house.

## DESIGN & MANUFACTURING

### Transport Frames & Cases

We understand transport cases and frames have an infinite portfolio of personalised designs to meet the demands of nationally recognised and project specific standards. Our trained team work closely with customers to ensure high engineered components for each project.

### Lifting Beams

Designed and manufactured by our own in-house engineering team, we offer a range of spreader beams, frames and lifting beams. These can be fixed length for a specific application or modular, to accommodate a number of different applications.

## Bespoke mechanical equipment & systems

Our team design and analyse bespoke mechanical equipment and systems to both nationally recognised and project specific standards. We can provide either the design or the complete package.

### Crane Structures

We can design, manufacture, install and test both ceiling mounted and free standing floor mounted light-weight lifting systems with capacities up to 10,000kg SWL. These are adaptable, flexible, cost competitive and enable low effort movement of loads.

### Container based rigging Lofts & Workshops

We have a range of standard design workshops and rigging lofts manufactured from DNV 2.7-1 containers that can be supplied at short notice. Alternatively, we can design and manufacture bespoke designs to suit your exact requirements.

### Fall Protection Systems

Our team is trained in the design, installation, thorough examination, testing and certification of a range of safety line systems, including wire rope and rails. We also supply a comprehensive range of height safety products including full body safety harnesses and shock absorbers.

## TESTING & INSPECTION

### Non-Destructive Testing

Our inspectors are qualified to carry out Magnetic Particle Inspection (MPI), Dye Penetrant Inspection (DPI), Ultrasonic Testing (UT) and visual weld inspections. They also have the necessary qualifications, medicals and experience to work on offshore locations.

### Lifting Equipment Statutory Inspection (LOLER)

Our highly skilled and LEEA qualified inspectors can carry out thorough examinations of your lifting equipment and height safety products and systems.

### Product Load Testing

At Lift-rite we provide testing services for all types of lifting appliances and associated equipment including 'A' frames, davits, cranes, runway beams, lift shaft beams, pad eyes and offshore / subsea structures and components.

### Weighing Services, Structures & Components

Our team provide a weighing service for all types of offshore/ subsea structures and components. With our own equipment we can weigh structures up to 800 tonnes to utilise our engineering capabilities and determine centres of gravity.
